Coloured Concrete

Enhance your next concrete project by adding a colour that will transform that traditional plain grey look to a more aesthetically decorative design with a rejuvenated bespoke look. Patios, footpaths, driveways, garage floors and milking parlours can now be coloured to add a vibrant, distinct and custom touch to these areas.

Large areas can be broken up using multiple colours and some colours can be used to blend in the concreted area with nature and the natural surrounds. Stamping the surface of a coloured concrete gives a further distinctive look that can mimic cobblestones or other patterns. A range of popular colours including red, yellow, brown, black and white are available with other colours on demand.

Coloured concrete has all the performance and durability characteristics associated with normal concrete with the added advantage of colour penetration throughout the full depth of the concrete, not just on the surface.

APPLICATIONS

- Residential floors, patios, driveways and footpaths
- Commercial floors, driveways and car parks
- Streetscape footpaths and public areas
- Milking parlours
- Garage floors

Key features and benefits

- Choice of aesthetically pleasing colours
- Colour is present through the full depth of concrete
- Strong and durable
- Long life with low maintenance
- Cost efficient compared with other paving

Technical specification

- I.S. EN 206 - Concrete Part 1 : Specification, Performance, Production and Conformity
- NRA Specification for Road Works - Series 800 and 1700
- Project Specific Specifications
