
Roadstone - leading supplier of building materials

Eave Ventilation System

The Roadstone Eave Ventilation System provides continuous over-fascia roof space ventilation in a simple weatherproof system. The system eliminates the need for a tilting fillet and reduces the required height of the fascia board.

Key features and benefits

- No need for timber tilting fillet.
- Prevents insulating materials blocking under- fascia vent grilles.
- Suitable for use with or without over- hanging soffit.
- Effective ventilation area 10,000 sq. mm. per meter run of eaves.
- Complies with requirements of Irish Building regulations for roof space ventilation.
- Available with increased ventilation area equivalent to 25mm per linear meter.
- Compatible for use with all Roadstone tile profiles.

Technical specification

CRH Roof Tiles are manufactured to exacting standards at our various Roof Tile Plants. Manufacturing is in compliance with I.S. E.N. 490: 2005 Concrete Roofing Tiles & Fittings and should be fixed in accordance with the Irish Code of Practice for Slating and Tiling I.C.P. 2:2002.
