
Roadstone - leading supplier of building materials

Precoated Chips

Roadstone precoated chips or chippings are Hi-PSV aggregate chips coated with bitumen and they are applied to the surface of 30% and 35% Hot Rolled Asphalt at a determined spread rate. The application of pre-coated chippings imparts surface macro texture and provides the surface with skid resistance properties.

Key features and benefits

- Provides surface macro texture
- Provides skid resistance properties
- Available in a range of sizes
- Made from local materials to the highest standards
- 100% Recyclable

Technical specification

Produced in accordance with

- IS EN 13108-4 Hot Rolled Asphalt
- NSAI's Standard Recommendation (SR) 28
- IS EN 13108-20: Type Testing and IS EN13108-21: Factory Production Control
