

# 2026 Sustainability Policy

Roadstone Ltd is a leading producer and supplier of construction materials and solutions in Ireland.

The company recognises that we must continually adapt our way of working to respond to the on-going climate crisis and therefore endeavour to develop sustainable solutions for our clients while, maintaining harmony with our natural environment and our people.

This Policy is communicated to all Roadstone Ltd employees and contractors.

The company recognises that the successful implementation of its policy depends on the ongoing commitment of all those working in the organisation.

Signed on behalf of  
Roadstone Limited:

**Peter O'Loghlin**

Managing Director,  
Ireland Materials

30th January 2026

## Our key objectives and targets are:

- To be a leader in sustainability and sustainable solutions within the building materials industry with our priority areas being Decarbonisation, Circularity and Water.
- Compliance with all relevant legislation, regulations, and operation to the International Standards ISO 9001, ISO 14001 and ISO 50001.
- The continuous improvement of our environmental performance, energy efficiency and GHG emissions.
- Achieving a 42% reduction in absolute Scope 1 & 2 GHG emissions by 2030 from a 2021 base year and reach net zero emissions by 2050.
- Align with CRH's target to reduce absolute Scope 1, 2 & 3 GHG emissions across the business by 30% by 2030 from a 2021 base year.
- Collaborate with policy makers, academia and industry to develop net zero technologies, solutions and enabling policies.
- Embracing circularity by maximising recovery, re-use and recycling opportunities for our products and processes.
- Fostering strong relationships with our neighbours at each of our locations.

## Policy implementation is achieved by:

- Setting, monitoring and reviewing sustainability objectives and targets as part of the company's Quality, Environmental and Energy Management Systems.
- Management commitment to achieving the aforementioned objectives and provision of the necessary resources.
- Educating, training and motivating employees and contractors to carry out tasks in a sustainably responsible manner.
- Providing integrated solutions that can be delivered more efficiently and sustainably by improving our energy efficiency, transitioning to renewable energy, decarbonising our supply chain and embedding circularity practices.
